Eval. Notes: This site is the former property of Nuodex Inc. The site has been undergoing a remediation pursuant to a Remediation Agreement with the Site Remediation Program (SRP), ISRA Case #s 85161 and 89475. More information on the history of the site is available in the SRP files. On August 2, 2002, Department representatives conducted a site visit to the above-referenced site. During our site visit, the inspectors observed a pile of what appear to be transformer bussings on a cracked cement pad on the site. The bussings were observed to have leaked a considerable amount of a petroleum product. A check of Department records revealed that no notification was received concerning the aforementioned discharge Considering the apparent age of the electrical equipment leaking, the petroleum product may contain polychlorinatedbiphenols (PCBs). During the site visit, a number of other concerns were also observed. Including; Site Access - Upon arriving at the site, the gate was found to be open. Access to the site needs to be secured to prevent trespass/illegal dumping. Several of the monitoring wells are cracked, broken, or are missing caps and/or locks. These wells need to be properly maintained. The asphalt cap on one area of the site has two large saplings and several large weeds growing through it. Repairs need to be made to improve the integrity of the cap Approximately 20 unmarked/unlabeled 55-gallon containers were observed scattered throughout the property, most were in proximity to wells. A determination needs to be made as to whether or not the contents of these drums are a hazardous waste. The drums need to be marked accordingly.

Violation	Activity Location:	NJ	Type: XXS	Determined Date: 08/02/2002	Determined By Agency: STATE	Responsible Agency: STATE
	Scheduled Compliance Date:			Actual Compliance Date: 08/11/2004	RTC Qualifier: OBSERVED	Sequence Number: 300
